

## Spherical washers and conical seats

**DIN  
6319**

ICS 21.060.30

Supersedes  
October 1997 edition.

Kugelscheiben, Kegelpfannen

*In keeping with current practice in standards published by the International Organization for Standardization (ISO), a comma has been used throughout as the decimal marker.*

## Foreword

This standard has been prepared by Technical Committee *Grundnormen für Spannzeuge und Vorrichtungen* of the Normenausschuss Werkzeuge und Spannzeuge (Tools and Clamping Devices Standards Committee).

### Amendments

This standard differs from the October 1997 edition in that it has been editorially revised and the specifications for surface roughness and hardness have been amended.

### Previous editions

DIN 6333: 1940-05; DIN 6319: 1935-08, 1944x-07, 1963-04, 1987-04, 1991-09, 1997-10.

All dimensions are in millimetres.

## 1 Scope

This standard specifies dimensions, the material and design of spherical washers and conical seats. These elements are designed to accommodate bolting forces where such are needed to compensate for clamping faces that are not parallel. Use of spherical washers together with conical seats permits bolts to be inclined up to 3° relative to the axis of the assembly. For slots, such as those in clamps covered in DIN 6314, DIN 6315 and DIN 6316, only type G conical seats shall be used, whilst type D seats are only to be used together with plain washers.

## 2 Normative references

This standard incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text, and the titles of the publications are listed below. For dated references, subsequent amendments to or revisions of any of these publications apply to this standard only when incorporated in it by amendment or revision. For undated references, the latest edition of the publication referred to applies.

In case of doubt, the German-language original should be consulted as the authoritative text.

### 3 Dimensions and designation

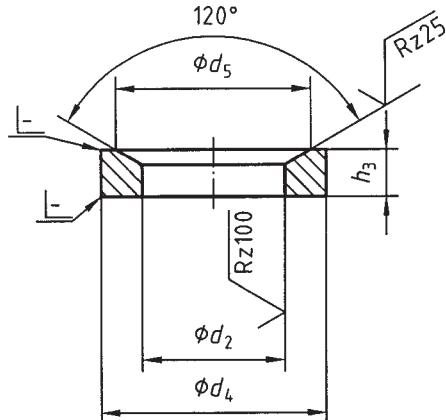

Design details left unspecified in figures 1 and 2 shall be selected as appropriate.  
General tolerances shall be class m tolerances as in ISO 2768-1.

$$\sqrt{Rz63} \left( \sqrt{Rz25} \quad \sqrt{Rz100} \right)$$

$$\sqrt{Rz63} \left( \sqrt{Rz25} \quad \sqrt{Rz100} \right)$$

<sup>1)</sup> This size is compatible with M14 external thread, series 2, as specified in DIN 13-1.

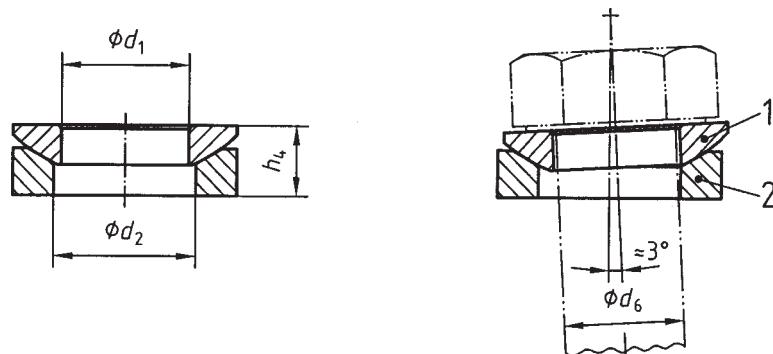

## 4 Material

Spherical washers and type D conical seats shall be made of case hardening steel and type G seats of steel for quenching and tempering, the grade being at the manufacturer's discretion.

## 5 Hardness

Spherical washers and type D conical seats shall be case hardened to a depth of  $(0,2 + 0,2)$  mm (450 HV 1), with a hardness of  $(550 + 100)$  HV 10. Type G seats shall be quenched and tempered and have a hardness of  $(350 + 80)$  HV 30.

## 6 Connecting dimensions

										2

<sup>1)</sup> Average workshop values based on tolerance class m as specified in ISO 2768.

<sup>2)</sup> This dimension enables the bolt to be inclined up to approximately 3° relative to the axis of the assembly.
